SUMMARY

Intégrateur d'usine logicielle pendant 2 ans, consultant Cloud & Ops plus d'un an avec une expérience de Dev web fullstack de 2 ans. Missions toutes composées de problématiques DevOps, architecture applicative et infra.

SKILLS

DevOps

Expert

Git Linux Kubernetes Docker
GCP

CI/CD

Advanced

Gitlab-CI Terraform Ansible
Jenkins

Cloud & Infrastructure

Advanced

AWS GCP Terraform Ansible
Prometheus Grafana Datadog
Vault

Development

Intermediate

Python Bash Go
JavaScript/Node.js Java SQL

WORK EXPERIENCE

Maintenance en conditions opérationnelles des outils du support IT, déploiement des applications sur des environnements managés, aide à la montée en compétence de l'équipe sur les nouvelles technologies

- Migrated 15+ IT support tools from legacy IaaS to GCP managed services (Cloud Run, Cloud SQL), reducing infra costs 30% and ops overhead 40%
- Delivered daily support to 200+ employees on Google Workspace/GitLab/Datadog, maintaining 99.5% uptime and <4h MTTR
- Implemented security hardening (mandatory MFA, secret rotation via Vault, Trivy scans in CI) across 5 environments, zero critical findings in audit

Site Reliability Engineer

Dec 2021 - May 2022

Maintenance en conditions opérationnelles, garant de la plate-forme d'intégration continue, des environnements de développement à la demande et de l'infrastructure globale, du réseau informatique et de la sécurité

- Maintained 99.9% uptime on multi-env Kubernetes platform (Rancher, 12 clusters) for 50+ devs; reduced incident response time 60% via Datadog/Elastic alerting
- Refactored on-demand dev environment provisioning (Terraform + Ansible), cutting spin-up time from 45min to 8min and saving 20h/week team effort
- Partnered with 5 dev teams to architect CI/CD pipelines (GitLab CI) and migrate 8 services to event-driven Kafka architecture

DevOps Integrator

Dec 2019 - Dec 2021

Polyvalent DevOps integration in the transversal deployment and support team for development and test tools

- Migrated 12+ containerized apps to private OpenShift cloud, scaling from 50 to 500+ pods with zero-downtime deployments
- Expanded GitLab CI/Jenkins pipelines for 30+ microservices; automated security scans (Sonar, OWASP) blocking 200+ vulnerabilities pre-prod
- Automated admin tasks via Ansible/Python, eliminating 15h/week manual work on PostgreSQL, XL Deploy, nginx configs

Cloud DevOps Engineer

May 2018 - Aug 2019

Migration of Mousquetaires group e-commerce web projects to the cloud (Google Cloud Platform), evolution and maintenance in operational conditions

- Built full observability stack (Prometheus/Grafana/APM) monitoring 50+ microservices, reducing MTTR 60% and enabling 99.95% SLA
- Automated platform ingress deployment via Terraform/GitLab CI, enabling zero-downtime releases for 200+ e-commerce sites
- Maintained cloud-native platform (GKE, Kafka, PostgreSQL) serving 10M+ requests/day with 99.9% uptime during retail peaks

DevOps Engineer

Sept 2017 - Apr 2018

Development of a multi-user IaaS-type web service for creating virtual machines on a single VMware infrastructure.

- Architected multi-tenant IaaS platform on VMware (vSphere, vRA), enabling self-service VM provisioning for 500+ internal users
- Standardized dev environments via Vagrant/Ansible, reducing onboarding from 2 days to 30min and enforcing consistent tooling across 8 devs
- Automated integration test and deployment pipeline (GitLab CI), moving release cycle from weekly to daily with 95% test coverage

Technical Architect

Feb 2017 - Aug 2017

Development of a connected insole management application for the acquisition, processing, and presentation of collected data in an agile environment.

- Defined requirements and wrote functional/technical specs for IoT platform processing 10K+ events/day from connected insole sensors
- Designed cloud-native architecture (AWS, React/Node.js, MySQL) and implemented CI/CD pipeline (GitLab CI) for automated deployments
- Administered Linux infra, wrote automation scripts (Bash/Python), configured production monitoring/alerting

System Administrator

Jan 2016 - Jan 2017

End-of-study project for the development of a connected object management platform in Smart Buildings.

- Administered Linux systems hosting dev tools (GitLab, Jenkins) and configured firewall rules for isolated IoT Smart Building network
- Designed data acquisition architecture (Node.js/AngularJS, MongoDB) ingesting 50K+ events/day from 200+ building sensors
- Implemented AWS backend services with auto-provisioning via Bash scripts, enabling scalable IoT data processing

PHP Technical Lead

Jun 2008 - Sept 2008

Improvement of a web platform for parking space reservation in a parking management company.

- Built delivery environment (GitLab CI, Linux servers) and configured hosting stack, reducing deployment time from hours to minutes
- Migrated legacy PHP parking reservation platform to Laravel, adding 5 features and improving page load time 40%
- Automated backup/restore procedures and implemented log aggregation (ELK), reducing incident diagnosis time 70%

PROJECTS

Odyssée agro-nomade

Dec 2022 - Jul 2026

agriculture

nomadisme

apprentissage continu

adaptabilité

resilience

veille

Tour du monde de 2-3 ans pour découvrir des cultures, comprendre la résilience et acquérir une expérience pratique en agriculture en contextes multiculturels.

EDUCATION

Master Information Systems Architecture at INSA de Rouen

Jan 2012 - Jan 2017
